

## Prevent Wire Fraud. Protect Private Information.

Last year, the real estate and title insurance industry had nearly a billion dollars targeted by wire fraud techniques like e-mail spoofing, device tampering and user credential interception. Using email and text messaging simply leaves the door open for hackers to intercept sensitive information.

Vialok (powered by KeyPASCO) is a secure alternative to email that provides real estate and title professionals with a cost-effective, easy-to-use solution that stops wire fraud before it happens.

## Complex technology. **Simple Idea.**

- **More security, no privacy invasion:** Our patented technology solution does not collect personal information; nor is it needed to work.
- **Multichannel Authentication:** The user, device and encrypted message are simultaneously verified through three secure channels.
- **Device-based security:** Fifty points across six layers, including geography and velocity, are monitored to ensure your device is in good health and only being used by you. Compromised devices are immediately blacklisted.
- **Quick and affordable integration:** Immediately begin securing transactions on an as-needed basis.
- **Backed by 100% success:** Vialok is powered by KeyPASCO, a global security technology company with a wire fraud prevention rate of 100%.
